

In the past, museums stored information about culture and history. However, nowadays this information can be found through the Internet and, therefore, there is no need for museums. Do you agree or disagree with this view?

Culture and history have a great impact on One's life and for a long time. Museums have been the Source of that information. However, the arrival of electronic gadgets has shifted that attention, So that people rely on internet for more or everything. This leads me to believe that there is no need for museums for Seeking information.

First and foremost, the internet Provides us with an ease of accessibility that is otherwise difficult with museums. Internet gives quick access to reliable information about different Cultures, their Characteristics and behavior, peculiar features all in a matter of minutes. For example it is easier to look up the internet than to visit a museum nearby to obtain details regarding an ancient artifact or relic. As a result, it saves us the extra cost of transport associated with visiting museums. Hence internet Serves as a suitable alternative to museums for cultural information.

Also, Security breach at museums can be of another Concern. The funds required for maintaining security at museums can be huge. Most museums also charge a nominal amount of entrance fees as well. This added focus on Security Can Put pressure on the government to arrange for extra funds. For example, Hill palace museum in Trippunithara which holds a large collection of cultural artifacts number of security cameras and personnel as well as additional surveillance daily for proper maintenance. All this further proves my point that museums are not a necessary requirement in the current scenario.

In Conclusion, availability of internet for Cultural knowledge diminishes the importance of museum deeming them as unnecessary. Difficulty in accessibility concerning society as well as security risk museums question the value of museums in our current society. All these factors prove the fact that internet will emerge as the sole preserver of information on our history for future generations.
